1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-7, drawn to a series of fiber optic channels; each fiber optic transceiver channel including a plurality of test pads, a power distribution bypass capacitor distributed along said series of fiber optic channels, a plurality of high voltage power supply and ground connections coupled through said power distribution bypass capacitor and distributed around said series of fiber optic transceiver channels, a threaded high voltage power supply connection extending to alternating ones of said series of fiber optic transceiver channels, classified in class 398, subclass 24.
 - II. Claims 8-18, drawn to a fiber optic channel for short wave fiber optic communications comprising at least a pair of high voltage power supply and ground connections', a plurality of test pads including at least a ground connection and a pair of differential output connections, and a channel decoupling capacitor positioned proximate to said pair of differential output connections, classified in class 398, subclass 202.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as a receiver with an array of plural photo detectors with a power distribution bypass capacitor distributed along said series of fiber optic transceiver channels. Invention II

can be used with a single receiver with a channel decoupling capacitor. See MPEP § 806.05(d).

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
